Who we are

At Jacarem, we have been pioneering connectivity excellence since 1987. From our headquarters in Chesham, Buckinghamshire, we combine decades of technical know-how with responsive customer service to supply mission-critical electronic connectors, hermetic seals and vacuum components worldwide. Hermetic & Vacuum Expertise

Our hermetic feedthroughs and custom vacuum flanges safeguard systems operating in harsh or high-vacuum environments. Whether you need UHV-rated CF flanges for research chambers or coaxial, fibre-optic and USB feedthroughs for spaceflight applications, we engineer airtight solutions that guarantee performance, durability and peace of mind. Connector Distribution & Cable Assembly

Alongside an unrivalled connector inventory—spanning circular, D-Sub, power, M8/M12 and spaceflight connectors—we operate a fully-equipped in-house cable assembly division. This allows us to design, prototype and manufacture bespoke wire harnesses under one roof, delivering faster lead-times and perfect mating-half compatibility. Why partner with us
We hold extensive UK stock, offer ISO-certified quality management, and back every project with expert engineering support. Our goal is simple: to make sourcing the right interconnect solution effortless, so you can focus on innovating.
